2 Introduction

2.1 Objectif

L'objectif de ce rapport est de statuer sur le mot clé :

• PTS_electronic_nb_state_plug_change_day:

Ce mot clé indique la capacité de changement d'état pour l'ensemble des prises chaque jour.

PTS_electronic_nb_plug_1000W_plug:

Ce mot clé indique la capacité de nombre de prises 1000W différentes pilotable par la Cultibox.

PTS_electronic_plug_one_reponse_time_s:

Ce mot clé indique la capacité au niveau du temps de réponse du pilotage d'une prise par la Cultibox.

2.2 Spécification du mot clé

Les spécifications du mot clé sont :

Mot clé	Minimum	Typique	Maximum	Unité
PTS_electronic_nb_state_plug_change_day			250	Change/10 prises/ jour
PTS_electronic_nb_plug_1000W_plug	1	2	9	prises
PTS_electronic_plug_one_reponse_time_s			5	Secondes

DOCUMENT GREEN BOX: Copyright © 20012-2013 GREEN BOX. Tous droits réservés. Ce document et l'information qu'il contient sont la propriété exclusive de GREEN BOX. Ils ne peuvent être reproduits ou divulgués sous quelque forme que ce soit sans l'accord préalable écrit de GREEN BOX.

2.3 Issues associées

L'issue associée à ce mot clé est :

Nom de l'issue	numéro	Туре
PTS_electronic_nb_state_plug_change_day	340	PTS
PTS_electronic_nb_plug_1000W_plug	341	PTS
PTS_electronic_plug_one_reponse_time_s	339	PTS
Prise qui ne change pas d'état	232	Bug
[CULTI] changement manuel d'état de la prise 7	403	Bug

L'ensemble des issues peut être lu à l'adresse suivante : http://code.google.com/p/cultibox/issues

2.4 Version de la PTS

Pour la validation des mots clés PTS_electronic_nb_state_plug_change_day, PTS_electronic_nb_plug_1000W_plug et PTS_electronic_plug_one_reponse_time_s ,on considère la révision suivante :

PTS Révision	Date
Révision 782	14/04/2013

3 DESCRIPTION DE L'ESSAI

3.1 Introduction

Ce test consiste à solliciter le maximum de changements d'état des prises pilotable à distance.

3.2 Matériels

3.2.1 La "planche à prise":

La "planche à prise" est un ensemble de 10 prises, dont le statut est en permanence contrôlé par un boitier d'acquisition USB.

Schéma du système de la "planche à prise":

DOCUMENT GREEN BOX: Copyright © 20012-2013 GREEN BOX. Tous droits réservés. Ce document et l'information qu'il contient sont la propriété exclusive de GREEN BOX. Ils ne peuvent être reproduits ou divulgués sous quelque forme que ce soit sans l'accord préalable écrit de GREEN BOX.

3.2.2 Ordinateur et programmes

Un ordinateur a été utilisé afin de récupérer les informations du boitier d'acquisition USB via un programme en C. Il nous a aussi permis de traiter les logs via un simple programme en Tcl/Tk qui nous permet de d'interpréter les résultats:

3.3 Description générale de l'essai

Nous allons comparer l'heure et l'état "allumé" ou "éteint" des chacune des 10 prises, aux programmes que nous avons enregistré sur la carte SD par le biais du logiciel de la Cultibox. La Cultibox commandera un total de 250 changements d'état pour les 10 prises pendant un période de 24 heures.

Les différents programmes sont fournis dans le chapitre suivant. ces programmes ont été prévu afin d'effectuer des changements d'état sur des cycles et des périodes variées: changement effectué sur 6 sec, passage de 00h00, changement d'état de plusieurs prises en simultanée,...

DOCUMENT GREEN BOX: Copyright © 20012-2013 GREEN BOX. Tous droits réservés. Ce document et l'information qu'il contient sont la propriété exclusive de GREEN BOX. Ils ne peuvent être reproduits ou divulgués sous quelque forme que ce soit sans l'accord préalable écrit de GREEN BOX.

4 ESSAI

4.1 Mesure initiale

La Cultibox est totalement fonctionnelle. Le temps de décalage entre l'horloge de la Cultibox et le PC est relevé.

4.2 Mise en place

La Cultibox est branchée, les 10 prises a piloter sont reliées sur la "planche à prises" et le programme d'enregistrement des relais est exécuté. L'essai à démarré le 02 février à 00h00 et terminera le 07 février à 23h59.

Les prises piloltés sont composées de :

- 1 prise 3500W
- 9 prises 1000W

4.3 Programmes testés

Les programmes testés sont les suivants:

Prise n°1:

Indice Type Réf. document

4.3.1 Mise en forme et traitement des résultats

Le traitement final est fourni sous forme d'une liste indiquant :

- la date
- l'heure enregistré par l'UsbDio pour un changement d'état
- L'heure prévu par la Cultibox pour un changement d'état
- L'écart en temps constaté

Ainsi que le résultat de ce changement d'état :

- Conformité de l'état de la prise: On/Off
- Conformité du temps de réponse : +/- 5 sec

Les paramètres appliqués pour le traitement final des logs sont:

- Offset appliqué = 61 sec (décalage initial entre le PC et la Cultibox)
- Offset RTC = 2 sec (décalage de la Cultibox par jour)

Ce traitement final est fourni pour les 258 changements d'états des 10 prises pilotées durant l'essai.

Cet essai c'est donc déroulé du 02 février à 00h00 au 07 février à 23h59. Le traitement final est fourni en annexe de ce document: <u>lien</u>

4.3.2 Analyse des résultats

Nous pouvons constaté que sur 6 jours complet d'essai, toutes les prises on parfaitement été contrôlées par la Cultibox, en fonction des programmes qui avaient été établis .La Cultibox est donc capable de gérer 250 changements d'états sur 10 prises pilotables.

Les temps de réponse enregistrés sont conformes aux spécifications de : +/- 5 secondes, à l'exception de la prise n°7 qui semble réagir différemment des autres prises: lien

Les temps de réponse sont régulièrement au delà des 5 secondes spécifié.

Suite a cette non conformité un ticket a été ouvert: issue 403.

Des essais complémentaires ont donc été effectués:

un test de 24h sur cette prise n°7 suivant le même programme que l'essai précédent.

Les resultats des cette essais complémentaire sont fourni en annexe de ce

document: Lien

DOCUMENT GREEN BOX: Copyright © 20012-2013 GREEN BOX. Tous droits réservés. Ce document et l'information qu'il contient sont la propriété exclusive de GREEN BOX. Ils ne peuvent être reproduits ou divulgués sous quelque forme que ce soit sans l'accord préalable écrit de GREEN BOX.

On peut constater que suite à la modification effectuée, le firmware 1.23 utilisé pour cet essai complémentaire a totalement corrigé le temps de réponse trop lent constaté lors du premier essai de février. La Cultibox est donc capable de piloter les prises qu'elle contrôle en dessous 5 secondes de temps de réponse.

4.3.3 Conclusion des analyses

Ces analyses montrent que, la capacité de la Cultibox à effectuer plus de 250 changements d'état, des prises pilotable à distance par jour, est pleinement respectée.

Ces analyses montrent que la capacité de la Cultibox à piloter les prises qu'elles contrôle, avec un temps de réponse de moins de 5 sec, est pleinement respectée.

Ces analyses montrent que la capacité de la Cultibox, à piloter au maximum 9 prises 1000W et une prise 3500W, est pleinement respectée

5 CONCLUSION

La Cultibox est donc capable de gérer 250 changements d'états sur 10 prises pilotables, dont une prise 3500W et neuf prises 1000W, avec un temps de réponse de moins de 5 secondes.

La cultibox est conforme au spécification du cahier des charges.
